

Workshop on economic valuation of forest ecosystem services

Forests provide a multitude of goods and services. They offer protection against natural hazards and deliver wood and drinking water. They are a habitat for plants and animals, as well as a space for recreation. Forests also contribute substantially to the conservation of landscape diversity and the storage of carbon dioxide. Our workshop aims at reviewing and discussing methods, results and policy implications of the economic valuation of forest functions in industrialized countries.

Place: Haute Ecole de Gestion de Genève,
Campus de Battelle, Bâtiment F, Room F305
7, route de Drize,
1227 Carouge

Date: 29 January 2016
